

Vision Punch Bender

Registronic Inline

Description:

The Billows Protocol Registronic Vision Punch Bender combines positioning using vision technology with automatic punching of press location notches and plate bending. The machine is designed to be part of an inline system for 24/7 automatic plate production.

Features:

- Advanced vision system for error free registration
- Fully automatic operation
- Pneumatic system for punching and bending
- Automatic lubrication of punches
- User friendly touch screen controls
- Punches and dies made from hardened tool steel
- Large waste tray
- Integral fault finding diagnostics
- Customer service modem support
- Virtually maintenance free
- Billows Protocol warranty
