

Vision Punch Bender

Registronic Automatic

Description:

The Billows Protocol Registronic Vision Punch Bender combines positioning using vision technology with automatic punching of press location notches and plate bending. Positioning of the plate is automatic using register marks exposed on the plate.

Features:

- Advanced vision system for error free registration
- Precise, automatic table adjustment
- Pneumatic system for punching and bending
- User friendly touch screen controls
- Punches and dies made from hardened tool steel
- Large waste tray
- Virtually maintenance free
- Billows Protocol warranty
